

Tracking & Traceability

Are you in search of a system that improves tracking and traceability on your shop floor seamlessly?
Consider Fusion Operations as your solution!

WHO

- 1 **Productivity & Optimization**
Witness the movement of materials, identify bottlenecks, optimize workflows, and eradicate inefficiencies.
- 2 **Resource Availability**
Minimize downtime, spot capacity constraints, and optimize allocation, ensuring resources are available when and where you need them.

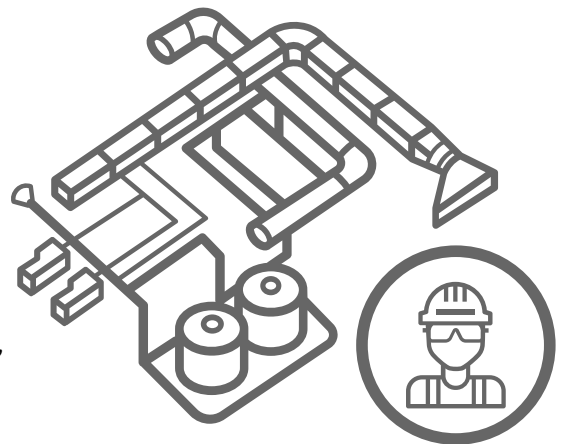

WHAT

- 1 **Work-in-Process Status**
Tracking work-in-process inventory, you're in control, ready to steer production progress, spot potential delays, and optimize production flow.
- 2 **Finished Goods Traceability**
Unique identifiers for each finished product enable swift location and action when necessary.

HOW

- 1 **Operations Optimization**
Analyze your production processes and material flow, then implement lean manufacturing principles for a more efficient, streamlined operation.
- 2 **Process Timing**
Identify bottlenecks, analyze cycle times, and optimize production schedules, ensuring smoother coordination and timely order completion.
- 3 **Reporting/Dashboards**
Go beyond numbers and get visual data insights. Monitor KPIs, track progress, and make data-driven decisions.
- 4 **Defective Product Traceability**
Track any defective products, enabling quick identification and resolution of quality issues.

With Fusion Operations, a more efficient and productive manufacturing process is ready for you.
Get started today and see the benefits for yourself!
